

The Digital Communist Manifesto 2021
By Satoshi Nakamoto

(Notes 2021-09-23)

Since we spend so much time on Clubhouse, we might as well write down what we said and publish them as the Digital Communist Manifesto (Manifesto), like a diary.

Each member may keep a different copy.

This is crowd sourcing, unseen during Karl Marx's era.

Written text can be made into YouTube videos so that they become more accessible.

If we train members to make videos, our network can grow like Fibonacci series.

Bourgeoisie (Capitalists) need Proletariat to make them rich, not the other way round. That was the case in 1921, where landless farmers toiled the land to make the landowners rich. In 2021, 7 billion Users make trillion dollar in revenues for MAGA (Microsoft Amazon Google Apple etc.) while receiving nothing in return.

The enemies are not invincible. Their biggest weakness is that they rely on our personal data to make money. Hence DSM.

World War I and II are not two separate wars, but one big war that spanned over 30 years (1914 to 1945), starting from the year that the Federal Reserves was created, to force the governments around the world to accept the New World Order. So the biggest targets then were Germany, Russia and China, as they were the largest economies in their respective regions.

We are experiencing a parallel in 2021. Understanding today's parallel in the 20th century will help us see a better picture, know the weaknesses and limitation of Proletariat's enemies and hence plan better strategies and take better actions. COVID has shut down international travels. Economies around the world may be running at 30% of 2019 level or less.

The number of so called "conspiracy theories" circulating on the Internet can easily surpass the number of people that we have close physical contacts with nowadays. To determine

which conspiracy “theories” (highlighted) are useful, while others not, let us use the following as references:

- i) The (known) history of the 20th century
- ii) Duniix Decentralized Socia Media Source Code

(Daily Clubhouse room to read the progress of the Manifesto?)

Manifesto of the Communist Party

A spectre is haunting Europe – the spectre of communism. All the powers of old Europe have entered into a holy alliance to exorcise this spectre: Pope and Tsar, Metternich and Guizot, French Radicals and German police-spies.

A spectre is haunting the world – the spectre of DIGITAL communism. All the powers of old Europe have entered into a holy alliance to exorcise this spectre: Pope and Tsar, Metternich and Guizot, French Radicals and German police-spies.

♦Parody is the most effective propaganda in an age of disinformation:

- We are writing:

"The Digital Communist Manifesto,
by Satoshi Nakamoto".

Collaborators welcome!!

METATRON

Cyberland Revolution

Digital Guerrilla

Digital Proletariat of the World, Unite!!!

全世界的数码无产者，团结起来!!!

Пролетарии цифрового всех стран, соединяйтесь!!!

Ordinary people learning metaprogramming for one months can solve university level calculus in one month.

Metaprogramming is the foundation of mathematics, human languages and programming languages.

Government and big companies do not want people to be intelligent, hence not teaching metaprogramming.

Clubhouse created a new era where one's ability to grab attention is defined by the precise timing to start talking as the previous speaker begins to wrap up.

Such skills do not seem to correlate to the sophistication of one's speech. As such, the density of genuine information in such speeches becomes so questionable that one may prudently assume these speeches to be "disinformation" by default.

Such disinformation also exists elsewhere on the Internet. This may not be the direct consequence of manipulation by certain huge corporations or governments. The sheer number of unqualified "content creators" would be sufficient to create such disinformation hell.

Since any effort to share genuine information would likely be drowned by disinformation, it is perhaps instructive to use parodies as a means of differentiating one's idea from such noises, where such disinformation are themselves the subject of the parodies.

And "Digital Communist Manifesto by Satoshi Nakamoto" simultaneously parodies two of the most influential human beings on contemporary world.

The very last word of the opening paragraph of Marx's Manifesto, "police-spies" literally highlighted the significance of "Satoshi Nakamoto".

Few people outside China would recognize Wuhao (No. 5) as Zhou Enlai's handle, who essentially created and managed the whole of Communist Party's (of China) espionage division. And to think how close Wuhao is to "Wumao" --- Wuhao is literally the Cantonese equivalent of Wumao, i.e. 50 cent, pro-China Internet trolls who get paid 50 cent for each post. This may not be a coincidence after all.

[From Cyberspace to Cyberland: How YOU May Change the World with TRUE Ownership of Digital Real Estates](#)

Digital Guerrilla 码农起义

Cyberland better concept than Cyperspace.

The history of the 20th century was shaped by Communist Revolutions, centred around land reforms, where militarized farmers overthrew capitalist governments to obtain the ownership of the land, which their ancestors painstakingly toiled for generations, but were not given a fair share of the proceeds.

In the 21st century, 7 billion "Users" who own the hardware of mobile devices and desktop computers, have been fooled into giving up their rights to their own personal data, inadvertently creating trillion dollar technology companies and billionaire shareholders, while suffering from the widening rich-poor gaps, much like their landless ancestors prior to Communist Revolutions.

The lie that user identities have to be managed by centralized database servers, where a user would login using username and password, has been perpetuated by the largest of technology companies, experts and academicians, much like a real life replay of the Emperor's New Clothes.

The alternative, variously known as public key cryptography or asymmetric cryptography, has been invented in the 1970s, classified as military secrets, declassified in the 1990s, and since widely used in all Internet browsers and apps (SSH, TLS, etc.), as a means to verify the identity of network devices or programs, but rarely to verify user identity. The only logical reason that we can conceive for this to happen is that, if public key cryptography is used as a means to verify user identity, then there would be no need for centralized user databases, which is the main source of income for tech MAGA (Microsoft, Amazon, Google, Apple), and the elimination of centralized user databases will render them obsolete!!

We would like to coin the word "cyberland", which is mentioned briefly in, to describe the ownership of digital real estate, versus "cyberspace", which conveys no direct analogy to land ownership and revolutions in modern history.

Public Key Cryptography (PKC) will not only revolutionize economies of peoples and countries around the world, it will also revolutionize governance, as it provides an essential, computational, mechanism to verify the authenticity of the information disclosed by an officer, in a public office, private company or personal communications.

Economics and Governance (RSA verification, transparency, no lies)
